HYPOTHETICAL SCENARIO.....3

PROJECT OVERVIEW3

BUSINESS PROCESS REQUIREMENTS.....4

DATA MIGRATION REQUIREMENTS.....5

DATA ACCESSIBILITY REQUIREMENTS5

REPORTING REQUIREMENTS.....5

Hypothetical Scenario

For the hypothetical scenario described below, the candidate will have **45 minutes** to read, evaluate, and document a high-level architectural solution. The solution should:

- Describe the system architecture and the rationale for the solution.
- Identify any potential key risk areas.

The candidate should target the presentation to a technical Information Technology (IT) architecture audience. In cases where requirements are not explicitly stated for the scenario, the candidate should use his or her best judgment and make appropriate assumptions based on the information provided. The candidate should indicate to the review board any assumptions that were made when designing the proposed solution. The candidate will **not** have an opportunity to ask clarifying questions related to the hypothetical scenario.

The candidate will be evaluated on his or her ability to assess the scenario requirements, design a solution, communicate the proposed architecture, and justify the design decisions. The candidate will not be evaluated on the tools used for the presentation.

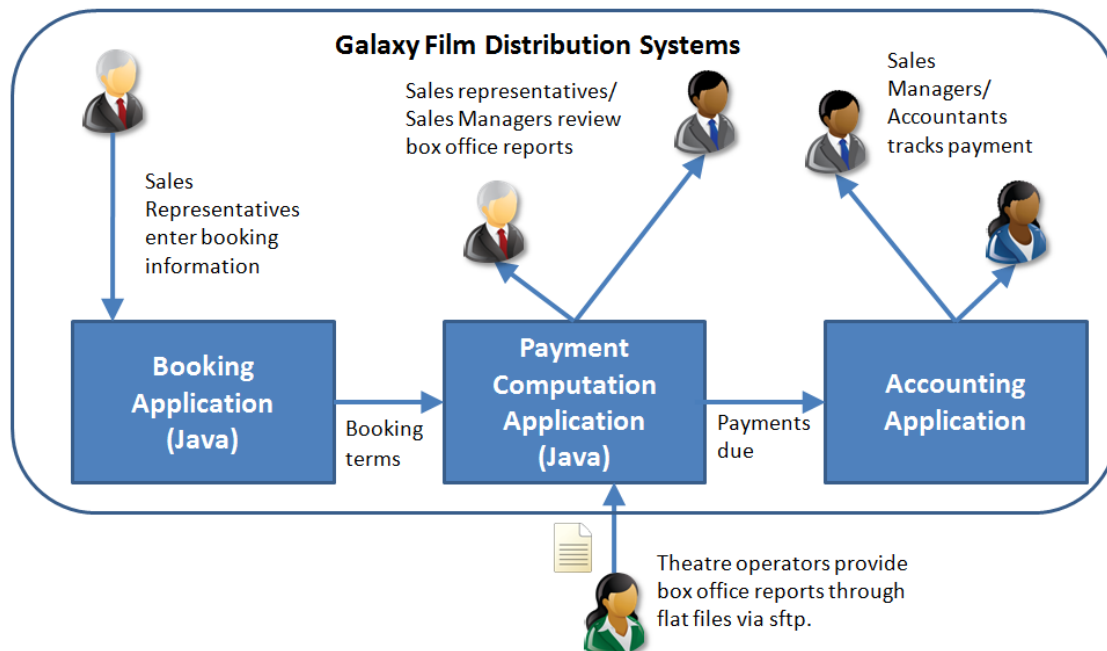

Project Overview

Galaxy Film Distributors (GFD) is considering using Salesforce to manage film distribution and payment. The process of film distribution and payment can roughly be broken into four parts:

- **Bookings:** A film buyer (on behalf of several small theatre operators) or a major theatre operator will negotiate terms with GFD to show a particular film.
- **Box office tracking:** The theatre operator will provide end-of-week box office receipts detailing the number of tickets sold at various prices for the film.
- **Payment computation:** The box office receipts, in conjunction with the initially negotiated terms, are used to determine the amount owed to GFD by the theatre operator. In addition, terms may be re-negotiated after a film has been released if the film is a box office failure. If this is the case, new terms must be taken into account, and the amount owed must be adjusted.
- **Accounting:** The amount owed for a particular film must be billed to the theatre operator and the system must maintain payment information. In addition, the accounting application must then make payments to the film studio that created the film.

There are three existing systems currently in place at GFD: a **booking application** that handles bookings, an **accounting application** that handles payment, and a **payment computation application** that processes box office reports to determine payment owed, which is integrated with the booking and accounting applications.

The **booking application** and the **payment computation application** were both developed in-house by GFD in Java.

The sales representatives at GFD who negotiate with the external theatre operators find the **booking application** cumbersome. Currently, sales representatives gather booking information on paper forms and enter bookings into the application manually. The booking application generates a contract that is manually sent to the appropriate theatre operator. The **booking application** is currently integrated with the **payment computation application** to convey the booking terms information necessary to determine payment amounts.

Theatre operators generate box office reports manually, either through flat files or paper forms, which are used by the **payment computation application**. The GFD Information Technology (IT) team finds the **payment computation application** difficult to maintain. GFD sales managers would prefer all theatre operators to enter box office reports electronically.

The **accounting application**, purchased by GFD, has strong integration capabilities and should be incorporated into the new solution.

GFD would like to replace the **booking application** and the **payment computation application**.

GFD distributes approximately 400 films per year. There are currently about 40,000 film screens in the United States operated by about 6,000 theatre operators. GFD is currently operating in the U.S. only, but has plans to expand internationally over the next two years. In strong months, the new solution should expect to receive up to 50,000 box office reports on any given day.

Business Process Requirements

- Sales representatives should be able to enter initial booking terms into the system as a draft.
- Once booking terms are agreed upon, a GFD-branded contract should be generated. The contract should be routed to the appropriate GFD executive for approval and an electronic signature. Once the contract has been approved and

signed, copies should be sent via email to the theatre operator. The theatre operator may sign the document electronically or sign and return a paper version. Upon receipt of the signed contract by GFD, the booking terms should be marked as complete.

- Once the booking terms are marked as complete, they should be visible through a portal to the appropriate theater operator and any designated film buyer acting on their behalf.
- Once a film has opened, the theatre operator must provide a box office report. Three weeks after the close of each week, the system determines payment for that week based on the current booking terms and the box office reports, then notifies the accounting application and the theatre operator.
- Once a film has been open for a month, the actual gross amount of the film may be adjusted and new booking terms may be applicable. At this point, payment amounts should be recalculated and sent to the accounting application, the information on the portal should be updated, and notifications should be sent to the theatre operators.
- As payments are received from theatre operators, the accounting application will be updated and will pass information to the system to indicate to which booking the funds have been applied. Additionally, once funds are received, theatre operators should be able to see the amount applied via the portal.

Data Migration Requirements

- GFD would like to import all of its historical data into the system. GFD has approximately 6,000,000 records regarding film transactions. Some historical records have up to 20 line items for week-by-week percentages.

Data Accessibility Requirements

- Sales representatives should be able to see all aspects of all booking terms, as well as associated box office reports and billing information.
- Once a booking is in the negotiation stage, sales representatives would like the ability to update booking terms from mobile devices until the final booking terms are ready for approval. GFD has not standardized on any particular mobile device.
- Theatre operators and their booking agents should be able to view only their own booking terms and account information. They do not need the ability to modify this information. Note that booking agents may work for more than one theatre operator.

Reporting Requirements

- For a given film, sales representatives and their managers would like to see overall box office numbers that can be broken down into weekly or daily numbers. In addition, they would like to be able to see the amount of income received on a film to date and be able to break it down by theatre operator and ticket type.
- Managers would like the ability to review summary reports that display overall box office and amount paid, by theatre operator and by region, across a specified timeframe.
